CoIpManager: Service module architecture

Last update: 07/02/2007

Author: Philippe Bernery <philippe.bernery@wengo.com>

How to place a Call?:
- Ask CallManager to create a CallSession
- Add Contacts in this CallSession
- call 'start' on CallSession
  - CallSession will look for a common Account between all added Contact
  - if found, CallSession will ask CallManager to look into its implementations
    if one of them is able to manage this type of Account
    - if so, CallSession asks to the found ICallSessionManager to create an ICallSession
    - CallSession configures ICallSession and 'start' the ICallSession. The call is started
