Author: Philippe Bernery <philippe.bernery@wengo.com> Last update: 30/01/2007 ColpManager follows the Mediator Design Pattern. It instanciates all service modules. DataManager group: These modules are used to add/remove/update content. AccountManager ContactManager UserProfileManager Connect group (even if there is only one module) Used to connect Account ColpManager ConnectManager Session group: A Session consists of a group of Contacts and a UserProfile. These peers can then communicate via a channel defined by the module. CallSessionManager SyncManager group: Used to synchronized data with external lib/software. ChatSessionManager AccountSyncManager SMSSessionManager ContactSyncManager FileSessionManager UserProfileManager
